固定資產管家

Fixed Asset Manager

安寶創科有限公司
SP INFINITE TECHNOLOGY LTD

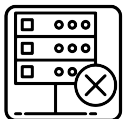

傳統固定資產管理問題

利用人手記錄或條碼技術進行資產管理需要大量的人力及時間。當遺失資產時，亦需要大量人力及時間尋找資產。

當資產擺放於高處或深處位置，用戶需要人為到達這些位置獲取可視化的資產信息，增添盤點時的難度及危險性。

因為依賴人力關係，容易產生人為錯誤導致資產管理結果與理想不符，可信度亦因此下降。

Fixed Asset Manager

安寶創科有限公司
SP INFINITE TECHNOLOGY LTD

RFID Features

Efficient stock take with one click

Detect up to 200 RFID tags at once

Over 10m read range (tag/environment dependent)

Real-time monitoring, automatic recording
Reduce human error

Most tags can last for 10 years or more

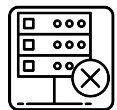

Obstacles in traditional fixed asset management

The use of manual recording or barcode scanning of asset require lots of power and time. Searching any lost asset is also time-consuming.

Certain assets are placed at locations that are difficult to reach. It is challenging for users to reach these locations to obtain asset information. This also increases the difficulty and risk of fixed asset management.

Inaccurate asset management caused by human error, leading to unsatisfied result and credibility.
